Dear Trent,

I just want to take the time to tell you how impressed I am with the Colorite Plastics aeration system. Having worked several years in fisheries and aquaculture, I have never seen a better aeration system. In our experimental prawn/catfish production ponds, we continually maintained 5 – 8 ppm of O₂. Normally during hot summer months, windless days, and early mornings, low O₂ levels are the limiting factor in production units. Such was not the case with this system. We had plenty of O₂ all summer.

I want to thank you for helping us install the system. If I can ever help you, please let me know.

Sincerely,

A handwritten signature in cursive script, appearing to read 'James Byford', written over a large, stylized circular flourish.
